

Learning Styles

Your Scores:

- **Auditory:** 20%
- **Tactile:** 35%
- **Visual:** 45%

You are a **Visual** learner! Check out the information below, or [view all of the learning styles](#).

I do not think that learning styles matter. I have my personal preference on what my favorite learning style is, and unsurprisingly it lines up with my learning style score. I like looking at pictures, graphs, and visual aids, and thus I prefer being a visual learner. However, I think that what matters more in how effectively I learn something is how much effort I put into studying it. For example, if I study a PowerPoint with visuals for an hour, I am going to learn a similar amount about the material as if I were to listen to a podcast about the subject. However, I do not think that everybody is like this. For example, some people have photographic memories. As a result, these people are going to learn something more effectively if they are seeing or reading it. There is also the fact that someone is going to want to put more effort into learning about a subject if they can do so in their preferred learning style. This is an example of why learning styles do matter in terms of helping people. Personally, I have been in school for 16 years, and at this point, I just think that learning is about effort.
